

Ayphen HMS — Hospital Owner Demo Plan

~17-minute end-to-end patient journey · 5 AI features · OPD → IPD → Discharge → Billing

Tenant: Apple Hospital (demo) · URL: care-sims.vercel.app · Login: admin@apple.local / Demo@1234

1. Pre-demo checklist (5 minutes before)

#	CHECK	HOW
A	Run the demo seed SQL — single paste, idempotent	Open Supabase SQL Editor → New Query → paste backend/migrations-manual/2026-06-18-demo-data-seed.sql → Run. This restores Ravi's admission to ACTIVE, creates the IN_PROGRESS consult, STAT lab order, issued Rx, OPD + IPD invoices, pharmacy stock, and 5 MAR doses in one shot.
B	Pre-warm all 5 AI features (so the buyer doesn't hit cold start)	Hit Patient AI Summary, Triage AI, Discharge Summary AI, Revenue Insights, Seasonal Trends once each — login → patients/Ravi → Triage → admissions/Ravi → reports
C	Tabs pre-opened: Login, Dashboard, Patients, Triage, Consultation, Lab, Pharmacy, Billing, Admissions, Discharge Summary, Reports	No URL typing during demo
D	Browser zoom 110%, DevTools closed, notifications muted	Cleaner visuals, no popups
E	Stable internet — backup mobile hotspot ready	Vercel + Render + Supabase all cloud-hosted

2. The full patient journey — 26 steps

login → walk-in → triage → consult (with lab+Rx) → lab result → pharmacy → OPD bill → admit → stay → discharge cascade → IPD bill → reports → multi-tenant

TIME	PAGE	ACTION	TALK TRACK	EXPECTED RESULT
BLOCK 1 — LOGIN + DASHBOARD (1 MIN)				
1	0:00 /login	Email admin@apple.local / Password Demo@1234 → Sign in	"One login, eleven roles — admin, doctor, nurse, lab, pharmacy, billing — all JWT-gated, all multi-tenant scoped by tenant_id."	Apple tenant dashboard loads
2	0:30 /app Dashboard	Hover the KPI cards	"57 backend modules, ~107 pages, 350+ endpoints. Real-time KPIs: admissions today, OPD revenue, low-stock alerts."	Live KPI dashboard

	TIME	PAGE	ACTION	TALK TRACK	EXPECTED RESULT
BLOCK 2 — WALK-IN PATIENT + AI TRIAGE (2 MIN)					
3	1:00	/app/patients	Search and open <i>Ravi Kumar</i>	"Patient 360 — demographics, allergies, visit history, vitals trend in one view."	Patient detail page
4	1:30	Patient → Overview tab	AI History Summary card → click Generate	AI #1 Patient History. "Gemini reads 12 months of consults, Rx and labs → one-paragraph briefing for the doctor. Cached on the record so it's instant on the second view."	AI-generated history paragraph
5	2:30	/app/nurse/triage	New triage → complaint " <i>chest pain, sweating, 45M</i> " → Get AI Suggestion	AI #2 Triage. "Suggests priority (RED/AMBER/GREEN), red flags, differential, recommended labs. <i>No drug suggestions</i> — patient-safety guardrail."	Priority chip, red flags list, differential, suggested labs
BLOCK 3 — DOCTOR CONSULTATION + LAB (INLINE) + RX (DEDICATED) (3 MIN)					
6	3:00	/app/doctor/consultations	Open today's queue → click Ravi Kumar's IN_PROGRESS row	"OPD queue — doctor sees waiting patients with triage priority and chief complaint."	Consultation form opens, chief complaint pre-filled
7	3:30	/app/doctor/consultation	Type HPI, examination, assessment, plan	"Structured SOAP capture. AI patient history at the top, allergies banner above the form."	Consult fields filled
8	4:30	Consultation → Lab Orders inline panel	Click "New Lab Order" → add <i>CBC, Troponin-I, ECG</i> → priority STAT → "Place Lab Order"	"Lab orders are placed <i>from inside the consult</i> — no page switch. Order links to this consultation automatically; auto-saves a draft consult if not yet saved."	3 lab tests submitted with priority STAT, lab queue updated

	TIME	PAGE	ACTION	TALK TRACK	EXPECTED RESULT
9	5:00	Consultation → right-rail Prescription button	Click → opens Prescriptions page with patient + consultation pre-selected → add Aspirin 75 OD x 30d, Atorvastatin 40 HS x 30d → save	"Rx goes through the dedicated Prescriptions module — allergy check, drug autocomplete, pharmacy queue auto-notified. Doctor returns to consult after saving."	Rx number generated, status <i>ISSUED</i>
10	5:30	Back on Consultation	Click Complete Consultation	"Consult locked. Audit trail timestamps it."	Status COMPLETED

BLOCK 4 — LAB + PHARMACY + OPD BILL (2.5 MIN)

11	6:00	<code>/app/lab</code>	Pick the pending order → click Enter Results	"Lab tech queue — pending orders sorted by urgency, STAT first."	Enter-results modal opens
12	6:30	Enter Results modal	Enter values for each test → flag CBC as <i>H</i> , Troponin <i>CRITICAL</i> → Save and Validate	"Per-row reference ranges, auto-colour flags (H/L/CRITICAL), digital validation signature. Result instantly visible to the doctor."	Result VALIDATED, doctor's lab inbox updated
13	7:00	<code>/app/pharmacy</code>	Pick the Rx → click Dispense → confirm stock	"Pharmacy queue. FEFO batch depletion picks earliest-expiring batch. Inventory decrements, batch row updates, low-stock alert if threshold hit."	Status DISPENSED, stock count drops, audit log row created
14	7:30	<code>/app/billing</code>	Find Ravi Kumar's OPD invoice → review consult fee + lab + Rx line items → click Collect Payment → cash	Billing "OPD invoice auto-assembled — consult fee, lab tests, pharmacy items, applicable tax. Payment modes: cash, UPI, card, insurance."	Status PAID, receipt printable

BLOCK 5 — ADMISSION + DURING-STAY (2 MIN)

15	8:30	<code>/app/admissions</code>	Click + New Admission → pick patient, ward, bed, admitting doctor, package, diagnosis	"Doctor decides patient needs admission. One form — bed allocation is real-time, bed flips to OCCUPIED in the same transaction."	Admission row <i>ACTIVE</i> , bed OCCUPIED, admission email sent to patient
----	------	------------------------------	--	--	---

	TIME	PAGE	ACTION	TALK TRACK	EXPECTED RESULT
16	9:00	/app/nurse/mar (or vitals)	Show the MAR for this admission → administer a scheduled dose → 5-rights checklist popup	" MAR with 5-rights verification — right patient, drug, dose, route, time. Withhold-with-reason path for missed doses. Audit log on every action."	Dose marked ADMINISTERED with timestamp + nurse signature
BLOCK 6 — DISCHARGE CASCADE (THE KILLER BLOCK · 3 MIN)					
17	9:30	/app/admissions	Click amber Discharge on the active row	Flow "Discharging is not a single button. It opens the structured discharge summary form — every discharge produces a real clinical document."	URL → /discharge-summary?admissionId=... , form opens with admission pre-selected
18	10:00	Discharge Summary page	Wait 1 second for auto-fill	"Patient name and Dr Rahul Sharma · General Medicine auto-fill from the admission record into a confirmation strip. The form physically can't link to the wrong patient."	Teal "Auto-filled from admission" strip
19	10:30	Discharge Summary form	Click purple Generate Draft with AI	AI #3 Discharge Summary. "Gemini reads admission record, every consult, every prescription, every lab result from the stay → drafts the entire summary structured."	Spinner → diagnosis / treatment / follow-up / dietary / activity fields all populate
20	11:30	Discharge Summary form	Edit one field, click Create Draft , then Approve on the new row	"Doctor stays in control. One Approve click triggers a four-way cascade in one DB transaction."	Status APPROVED. Cascade fires.
21	12:00	Verify cascade — open Admissions, Wards, Housekeeping in 3 quick tabs	Show: admission DISCHARGED · bed CLEANING · HIGH housekeeping task · patient email queued	"Four side effects from one click — atomic, idempotent, re-approving does nothing duplicate."	All four states confirmed
BLOCK 7 — FINAL IPD BILL (1 MIN)					
22	12:30	/app/billing	Find invoice INV-DEMO-IPD-001 for Ravi Kumar → open detail	Billing "IPD final bill for the 5-day ICU stay — bed charges, doctor rounds,	Itemised IPD invoice with 9 line items and totals

TIME	PAGE	ACTION	TALK TRACK	EXPECTED RESULT	
			nursing care, IV antibiotics & fluids, lab bundle, imaging, package discount, consumables. Net: ₹27,300."		
23	13:00	IPD invoice → Collect Payment	Mode UPI → ₹15,000 → record. Then Mode INSURANCE → ₹12,300 → record. Invoice → PAID.	"Two-step recording: patient share via UPI, balance via insurance. Each payment is its own audit row."	Receipt printable, invoice status PAID
BLOCK 8 — REPORTS AI + MULTI-TENANT + WRAP (2.5 MIN)					
24	13:30	/app/reports → Revenue tab	Click AI Insights	AI #4 Revenue Insights. "Compares last 30 days vs prior 30. Writes the CFO commentary in plain English."	Markdown bullets explaining revenue drivers
25	14:30	Reports → OPD tab	Click Seasonal Trends	AI #5 Seasonal Trends. "This month vs same month last year. Powers staffing & procurement planning."	Year-over-year trend analysis
26	15:30	Logout → log in as platform.owner@ayphen.local	Show tenant list, per-tenant revenue, feature flags	Multi-tenant "Every Apple record was isolated by tenant_id. Here's the operator view — one platform, N hospitals, tenant-level AI on/off, new tenant onboards in 10 minutes."	Platform admin dashboard

3. Time budget

BLOCK	STEPS	MINUTES
Login & dashboard	1–2	1.0
Walk-in + AI Patient History + AI Triage	3–5	2.0
Doctor consultation with inline lab & Rx	6–10	3.0
Lab result entry + Pharmacy dispense + OPD bill	11–14	2.5
Admission + MAR / nurse workflow	15–16	2.0
Discharge cascade (<i>killer block</i>)	17–21	3.0
Final IPD bill	22–23	1.0
Reports AI + Multi-tenant + wrap	24–26	2.5
Total		~17 minutes

Pacing tip. Steps 8–14 (consult + lab + pharmacy + OPD bill) prove daily workflow depth — go briskly. Steps 17–21 (the discharge cascade) are the emotional peak — slow down and let the buyer absorb each side effect.

4. Backup plan if something breaks live

FAILURE	FALLBACK
AI returns generic “To be reviewed” placeholders	Switch to seeded admission <code>ADM-2026-DEMO-001</code> (rich pneumonia case)
Vercel slow / cold-start	Pre-warm by loading every page 60 sec before
Network drops	Switch to mobile hotspot; backup screenshot deck ready
Backend 500s	Run the Reset SQL block and restart from step 15
AI rate-limit (429)	“This is the free tier — paid tier removes the limit” and continue without AI
Supabase unreachable (P1001)	Mention infra resiliency story; alternatively show a pre-recorded 30-sec video
Lab/pharmacy queue empty mid-demo	Skip step 11 or 13; mention “normally there'd be a queue”; jump to billing

5. Reset SQL — between demos

The full seed/reset is in `backend/migrations-manual/2026-06-18-demo-data-seed.sql` — it's idempotent, just paste and run again. Quick discharge-only reset (if you've used Ravi as the demo but want to keep the rest of the state):

```
UPDATE admissions
  SET status='ACTIVE', discharge_date=NULL, discharge_diagnosis=NULL
 WHERE admission_number='ADM-2026-000002';
```

```

UPDATE beds SET status='OCCUPIED'
WHERE id='9fc72398-8ee1-49ae-9697-fd0b57158b7a';

UPDATE housekeeping_tasks SET status='COMPLETED'
WHERE bed_id='9fc72398-8ee1-49ae-9697-fd0b57158b7a' AND status='PENDING';

DELETE FROM discharge_summaries
WHERE admission_id='ca9958f7-ced6-4e10-94de-d585950a76d1';

-- Reset OPD/IPD invoices to PENDING if you collected payment during demo:
UPDATE invoices SET status='PENDING', paid_amount=0
WHERE invoice_number IN ('INV-DEMO-OPD-001','INV-DEMO-IPD-001');
DELETE FROM invoice_payments
WHERE invoice_id IN (
  SELECT id FROM invoices WHERE invoice_number IN ('INV-DEMO-OPD-001','INV-DEMO-IPD-001')
);

```

6. Killer talking points (filler)

- **Five production AI features today** — Patient History, Triage, Discharge Summary, Revenue Insights, Seasonal Trends. All cite source data so doctors can verify before signing.
- **Inline workflow** — lab orders and prescriptions are written *inside* the consultation, not in a separate page. One physical interaction per clinical decision.
- **One-transaction discharge cascade** — admission DISCHARGED · bed CLEANING · housekeeping task · patient email. Atomic. Idempotent.
- **FEFO inventory depletion** — pharmacy auto-picks earliest-expiring batch. No expired-stock liability.
- **MAR with 5-rights verification** — every dose administered confirms right patient, drug, dose, route, time. Withhold-with-reason path.
- **Real billing engine** — OPD invoice assembles consult + lab + Rx automatically; IPD invoice assembles bed charges (cron) + meds + lab + OT + package adjustment.
- **Multi-tenant from day zero** — every record scoped by `tenant_id`. New hospital onboards in 10 minutes including locations, wards, beds, users.
- **Indian context** — NABH-aligned, MLC flag on the roadmap, Aadhaar-linked patient registry, GST-compliant invoicing.
- **30 inpatient departments modelled**, Lab QC with auto-PASS/WARN/FAIL, 57 backend modules, 350+ endpoints, 107 pages.

7. Post-demo follow-up

- Send buyer a one-page recap PDF (trimmed version of this doc).
- Offer a 30-day pilot tenant with seeded data.
- Schedule CTO/CIO deep-dive on deployment (any cloud, on-prem optional).
- Provide pricing — per bed per month, with AI feature tier.
